Altai Launches VX200

Altai would like to proudly announce the launch of their brand-new product, VX200 Dual-Band CPE/AP. As a leading provider of wireless connection for industrial grade application, Altai has always been insistent on the quality of their products. The VX200, with fast roaming support, enhanced vibration protection, advanced heat dissipation and compact design, is ideally suited for installation on AGV or AS/RS platform in manufacturing plants, logistics hubs and warehouses.

With its durable form factor, optimized RF performance and flexible deployment options, the VX200 is the most affordable high-performance CPE in the market for real-time device monitoring, remote management, and data collection in a wide range of industrial environments.

Altai's New Project for Bolloré's Container Port in Senegal

Followed by a project deployed for the Congo Terminal at Pointe-Noire in Congo, Altai is again selected by Bolloré Transport & Logistics, one of the world's leading global logistics groups, to deploy another large-scale project in Senegal. The new project will be deployed for Dakar Terminal of the Port of Dakar, the third largest port in West Africa.

Altai's sales representatives for African region have just visited the port recently for site survey. Dakar Terminal has launched an extensive investment plan for bulk-handling equipment adapted to Ro-Ro vessels and for infrastructure work in order to

renovate the yard. The terminal deals with the local market, but also with goods in transit toward the subregion.

Altai' New Partner in South Africa

Altai has recently signed a new partner, COREX, for the business in South Africa region. COREX is an experienced ICT products distributor founded in 2003. It has a varied and extensive portfolio of products, services and synergetic solutions that can be tailor-made for any internet services provider.

The company has an aspiration to change the ICT environment and promote cloud-based business model in South Africa. This goal is aligned with Altai's objective to promote automation in all industries. Altai believes the collaboration of the two companies will foster the development of South Africa in terms of digitalization in different industries.

Altai's Certification Training in Chihuahua of Mexico

Altai has conducted a quarterly certification training for its resellers in Mexico in December.

The training was held in Chihuahua of Mexico, which is the headquarter of Altai's long-term distributor, Syscom, in Mexico.

During the training, Altai's representatives introduced the new products of Altai and reinforced the winning edges of Altai's products to its resellers in Mexico. Fruitful discussions and insightful ideas were exchanged in the discussion

session afterwards. More similar programs will be held in the coming year of 2020.

Altai Releases the Latest Firmware

Altai has recently updated the AP firmware to v3.1.3.1317. The new firmware is applicable to AX500, IX500 and CX200 series.

Here are the new features and enhancements of the new firmware:

1. Support band steering and ACL MAC filtering.
2. Support button-less AP reset tool.
3. Support SSH access configuration, i.e. enabled/disabled, and port number modification.
4. Update "login.altaittechnologies.com" HTTPS SSL certificate for portal authentication.
5. Support WiFi syslog configuration on a per-WLAN basis. When enabled, all those event logs related to client association/disassociation of the WLAN will be written to syslog file instead of wifi file for easier troubleshooting.
