Company Update

Altai's Response to COVID-19

The outbreak of COVID-19 has become pandemic. Although the situation has brought adverse impact to various industries in terms of business operation, under the premise of maintaining employees' health and safety, Altai's headquarters at Hong Kong and branch office at Shenzhen would remain normal functions and provide usual support to our customers.

At the same time, Altai has been working around the clock with our contract manufacturers and suppliers to manage the supply chain challenges brought by the epidemic. We expect that certain items will inevitably have a longer delivery lead-time in the next couple of months. Therefore, we would strongly suggest our customers/partners to take the delivery time into consideration and plan the projects/purchase accordingly.

Please contact our sales representatives or distributors in your region for ordering arrangements.

Altai Participates in Mask Distribution to Fight Coronavirus

Dr. Raymond Leung, the chairman and CEO of Altai Technologies, the world's leading supplier of outdoor WiFi products, is also the chairman of Give2Asia Foundation Limited, Hong Kong, a nonprofit organization works with local charities.

In regard of the coronavirus outbreak, Give2Asia purchased an amount of 400,000 masks for distribution to hospitals and NGOs in Hong Kong and Mainland China. In the process, Altai Technologies provided a pro bono basis support in the logistics and distribution arrangement. With Altai's support, the masks were smoothly delivered from the mask manufacturing company to all of the benefiting organizations within a few days.

Altai's Dry Port Solution for CONCOR

Once again, Container Corporation of India Ltd. (CONCOR), the market leader in multimodal logistics operation in India, has chosen Altai for the expansion in eight more locations following the satisfying result of previous network deployment. The network is able to help CONCOR to accurately manage the data from the field and validate from the database of their ETMS/DTMS/CCLS. The entire coverage area includes stack area, rail side, yards, administrative building and warehouses etc. The wireless network is required to cover all mentioned areas without any blind spot or down time. At least thousands of containers are densely stacked at the height of five containers.

Since standard access points are not suitable for deployment in container yard due to signal blockage by cranes and container stacking, Altai's A8n(ac) Wi-Fi base-stations, A2 bridges and Access Controller have been used at different locations with redundant coverage for large area coverage and network management.

Altai's New Project with Sonatel in Guinea

Altai has signed up a new partner, Sonatel, in Senegal to take care of its business in West African region. Sonatel is the principal telecommunications service provider in Senegal and is majority owned by the French multinational telecommunications corporation, Orange.

Marking the start of Altai and Sonatel's collaboration, the two companies will work on a new project for Bolloré's container port in Conakry of Guinea. Bolloré Ports is the global market leader of transportation and logistics industries. It has already adopted Altai's Super WiFi solutions in their other ports. With the patented smart antenna technology, Altai's Super WiFi base stations always have outstanding RF performance in challenging environments especially for container ports, where metal containers are obstacles for WiFi signals. The logistics leader has been highly satisfied by the outcome brought by Altai's products. In fact, Altai Super WiFi has already been deployed in more than 200 container ports all over the world.

Product News

Altai's Latest Firmware for CX200 Available

Altai has released the latest firmware (v3.1.3.1402) for CX200 with the Quick Start Guide already available in the Technical Zone of Altai's website. The major change of the new firmware is the support of a new PoE injector with factory reset button. With the reset button, users can restore the device to factory default settings when needed.

The updated Quick Start Guide has also included the simplified configuration steps of CX200 which is easier for users to refer to.

Users can now download the latest Quick Start Guide in the Technical Zone at Altai's official website.
