

Company Update

Altai, the Best Wireless Solution for Container Ports

Since its inception, Altai has been building presence in container ports and now its Super WiFi becomes the de facto solution for wireless infrastructure in the industry. Having learnt Altai's reputation, the leading logistics company in Chile, Sitrans, has recently selected Altai to provide wireless connectivity for their terminals in San Antonio.

Altai has proposed its flagship base station A8n as well as A2, A3-Ei and C2s to form a robust Wi-Fi Network to fully cover the container yards and warehouses in both Terminal San Antonio Bajo and Terminal San Antonio Alto. Altai's patented smart antenna technology has minimized the number of APs needed and thus led to a much lower cost of ownership comparing with other vendors. The new wireless network has greatly uplifted the terminals' operation efficiency.

Enabling School Wi-Fi in Tanzania

Knowing that children is our future, Altai always believes in bringing broadband connectivity

to children as one of its key missions. For this reason, Altai has been helping many schools all over the world to implement its Super WiFi solution. In a recent project, Altai would deploy for the schools in Zanzibar of Tanzania. The Wi-Fi network will be used by students for internet access and will surely benefit them in their learning process.

Currently, Altai's devices have already been delivered to Zanibar and the deployment process shall be completed soon.

Altai to Support Interactive Learning in Malaysia

Besides Africa, Altai's effort on connecting students with Wi-Fi is also benefiting other regions of the world. In a project taken place in Malaysia, Altai has largely improved students' learning experience in the schools of Sekolah Agama Kerajaan Johor (SAKJ), an Islamic education group administered by Johor Government through the Islamic Education Division of Johor Islamic Religious Department.

Overcoming the challenges including large coverage area and demanding user capacity with its patented technology and superior RF performance, Altai has enabled interactive learning for the students including video conferencing and has allowed teachers to tailor-make lessons and prepare multimedia presentations.

Please connect with Altai to learn more details of these projects.
