Altai Brings Wi-Fi to Trailside RV Park

Trailside RV Park was established as a family owned and operated campground in the 1960s. But, as the popularity of RV's grew, the property was converted into an RV park in the 1970s. Over the years, thousands of travelers seeking an overnight spot to rest, RV vacationers,

retirees and members of the mobile workforce (construction workers, pipe fitters, electricians etc.) and others passing through western Missouri stop to enjoy the relaxed RV lifestyle Trailside RV Park offers.

RV enthusiasts are serious about their need for creature comforts and wireless connectivity has moved to the top of that list with society's heavy reliance on all things digital. And, while Trailside has provided Wi-Fi connectivity for many years, outages, poor coverage and resulting guest complaints had

reached a critical level by Summer of 2021 causing the park's manager to look for new technology.

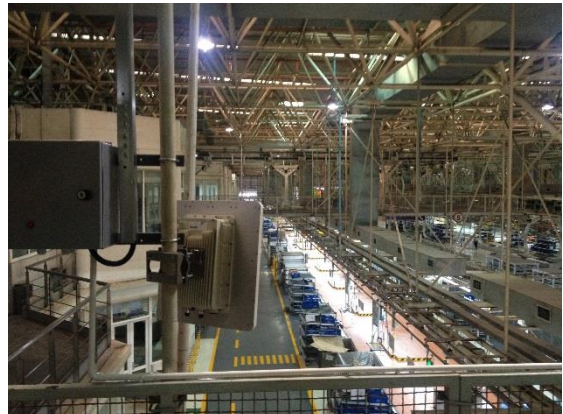

Replacing the existing wireless network in the RV park, Altai Super WiFi now delivers exceptional in/outdoor coverage and throughput across the entire property with the use of just three Super WiFi access points – all mounted at the centrally located park office. To enhance coverage at the far east and west ends of the grounds, small repeaters were used to re-populate the signal generated by the primary APs.

Company Events

Altai Super WiFi, the Booster for Industrial Applications

Wi-Fi Now Special Event: Wide-Area 'Altai Super WiFi' for Industrial Applications, organized by Wi-Fi Now and Krysp Wireless, Altai's distributor in US, was successfully held on 9 Feb. The event has attracted more than 100 attendants all over the world. Over the webinar, Altai's Vice President of Business Development, Mr Ken Leung, presented Altai's unique patented technology and shared some of the large-scale successful projects for industrial applications.

The presentation was well received by the attendants. The fact that Altai's solution can provide a much more reliable Wi-Fi network with less APs than other competitors and lower total cost of ownership (TCO) has stunned the audience.

Super WiFi Shines on SYSCOMExpo

This year's SYSCOMExpo was successfully held in Guadalajara, Mexico from 17 – 18 February. It is an annual exhibition & conference hosted by Altai's local distributor, Syscom, in Mexico. As usual, this year's event gathered manufacturers from different sectors across the world to showcase their latest solutions with conferences on the popular topics among the industry, with Altai showcasing its flagship products at the centre of telecommunications sector.

During the event, some of Altai's most popular products were displayed with Altai's LATAM sales team explaining Altai's unique technology and successful projects in details to the visitors. Altai's Regional Business Development Director for LATAM, Javier Mochnacs, has presented on "Solving Industrial Wi-Fi Connectivity with Altai" and attracted many participants of the show to understand how Altai's Super WiFi solution can transform the operation process into automation with superior RF performance whilst saving operation cost.
