

Company Update

Turkish Automotive Parts Production Plant Powered by Altai

Altai has recently deployed a Super WiFi network for Linde Opsan and the project was completed with the customer's stringent requirements fully satisfied.

Established by the partnership of the leading automotive parts manufacturers, Opsan in Turkey and Linde + Wiemann in Germany, Linde Opsan is among the leading companies in Turkey in the field of high-strength parts produced with rollform, welding and stretch bending technologies.

Altai's Super WiFi solution provides Linde Opsan a reliable and scalable Wi-Fi network for them to realize automation. The project has adopted Altai's flagship A8n(ac) series that is well known for its outstanding RF performance and patented smart antenna technology.

Boosting Ro-Ro Terminal in Ivory Coast with Super WiFi

As de facto standard for wireless network coverage at container ports and terminals, Altai has won another Ro-Ro terminal project to deploy a reliable Wi-Fi network for Terminal Roulier d'Abidjan (TERRA) in Abidjan. The terminal has an area of 8.1 ha including 6.5 ha of

storage area that can accommodate up to 3,500 light vehicles. Starting its operation since 2010, TERRA has been recognized as a port facility since August 2013 by the Direction Générale des Affaires Maritimes et Portuaires (DGAMP).

Benefiting from the expertise and know-how of handlers specialized in ro-ro operations, TERRA's priority is to

optimize their logistics operation in order to satisfy their customers with a guarantee of speed, reliability and security. Following their neighbour at Côte d'Ivoire Terminal, the management team of TERRA decided to upgrade their existing network system to Altai Super WiFi solution. In this project, Altai's flagship A8n base station will be deployed to provide a seamless network coverage.

Company Events

Altai is Gearing Up for Brazilian Market!

Altai's distributor in Brazil, Spectra, has organized a series of roadshows in five important state capitals in the Northeast Brazil from June to August. The two companies are confident that these events will not only increase Altai's brand exposure but will also open more doors to the Brazilian market.

The first roadshow in Natal was already completed successfully. Potential customers were invited to attend presentations and meetings where Altai Super WiFi solution and relevant successful projects were introduced. All participants showed great interest in Altai's transcendent technology

and flexible solutions. Altai and Spectra are looking forward to collaborate with them and bring the best quality Wi-Fi to Brazil.

The next roadshow will take place in São Luís of Maranhão State.
